Model Practical

Name: Delisha A K

Course code: CS4010

Reg No: 192511307

Slot: D

1. Conference Management System

Aim:

To design a conference management system using UML for registration, paper submission, session scheduling, payment and certificate generation.

Algorithm:

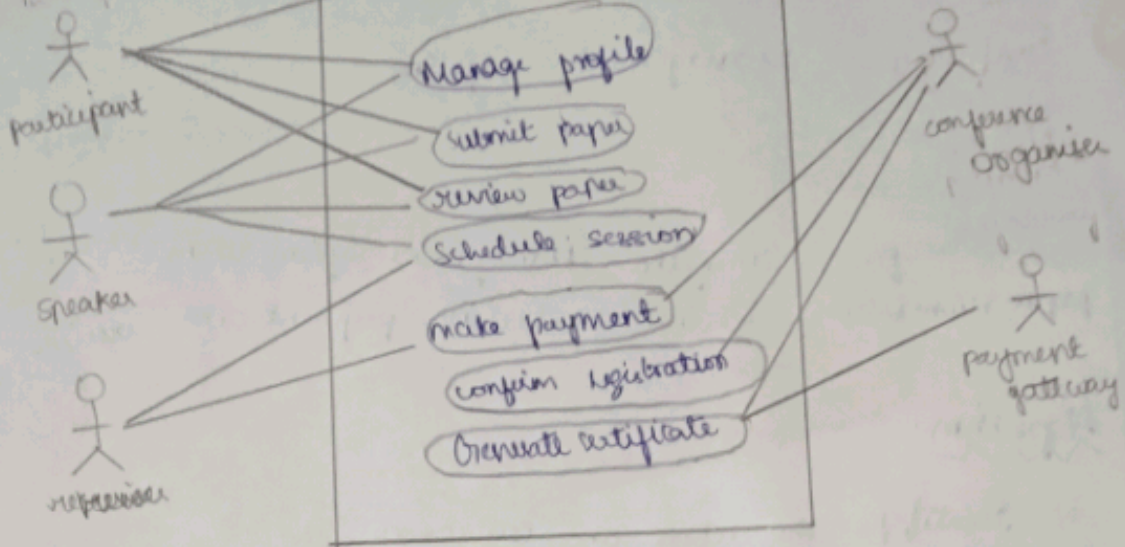

- i) Identify the actors and use cases
- ii) Identify classes, attributes, methods and relationships
- iii) Draw the use case diagrams showing the interactions between actors and the system.
- iv) Define the relationships between the classes
- v) Draw the class diagram
- vi) Select the participant registration and paper submission

Scenario

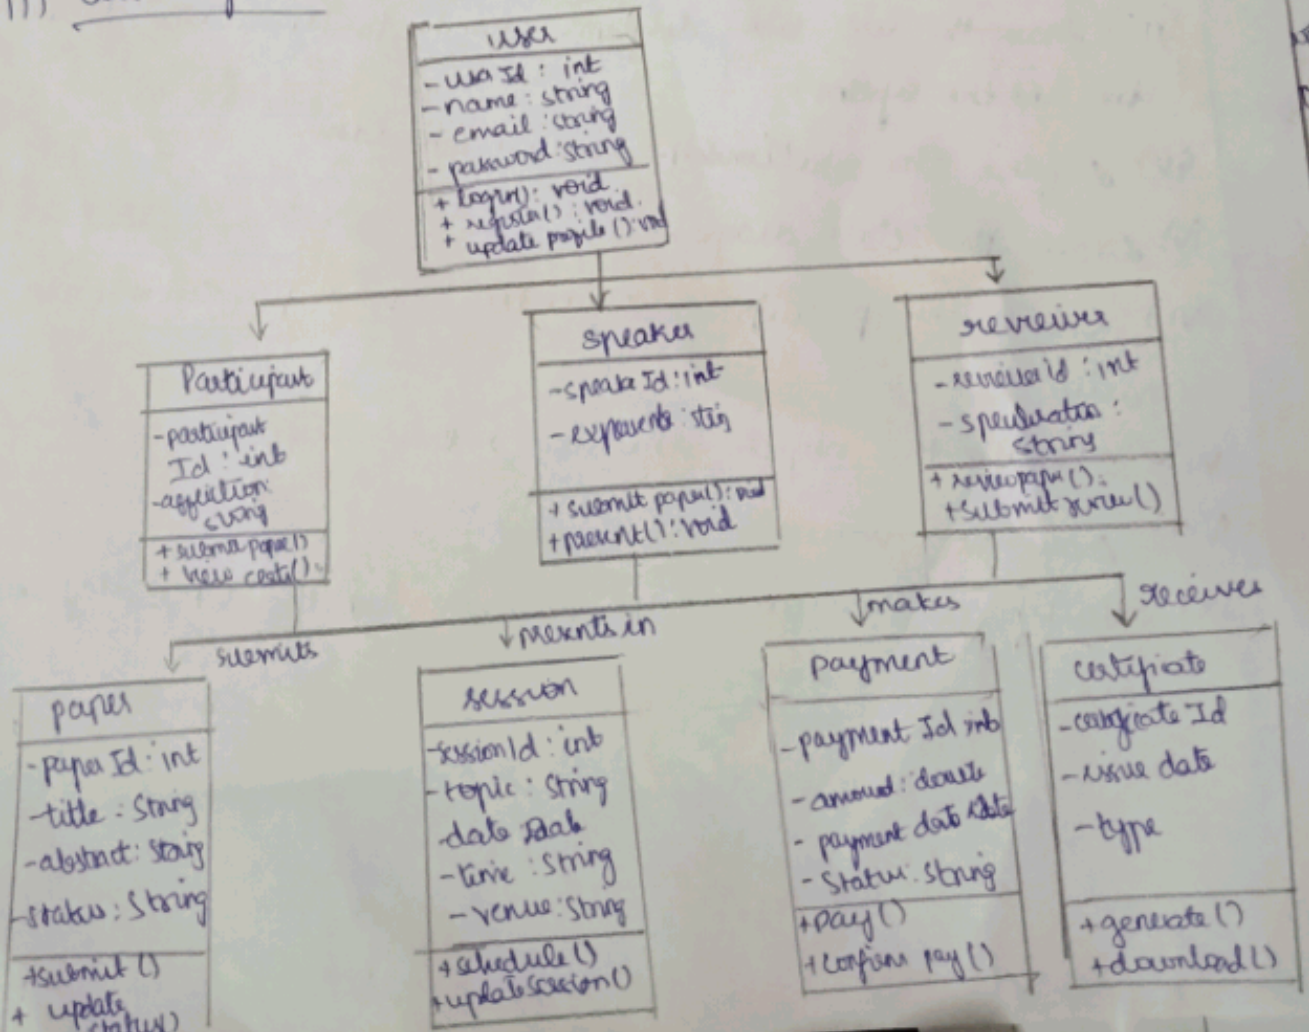

- vii) Identify the objects involved & their sequence of interactions
- viii) Draw the sequence diagram
- ix) Verify all required system functions in the UML diagrams.

Diagram:

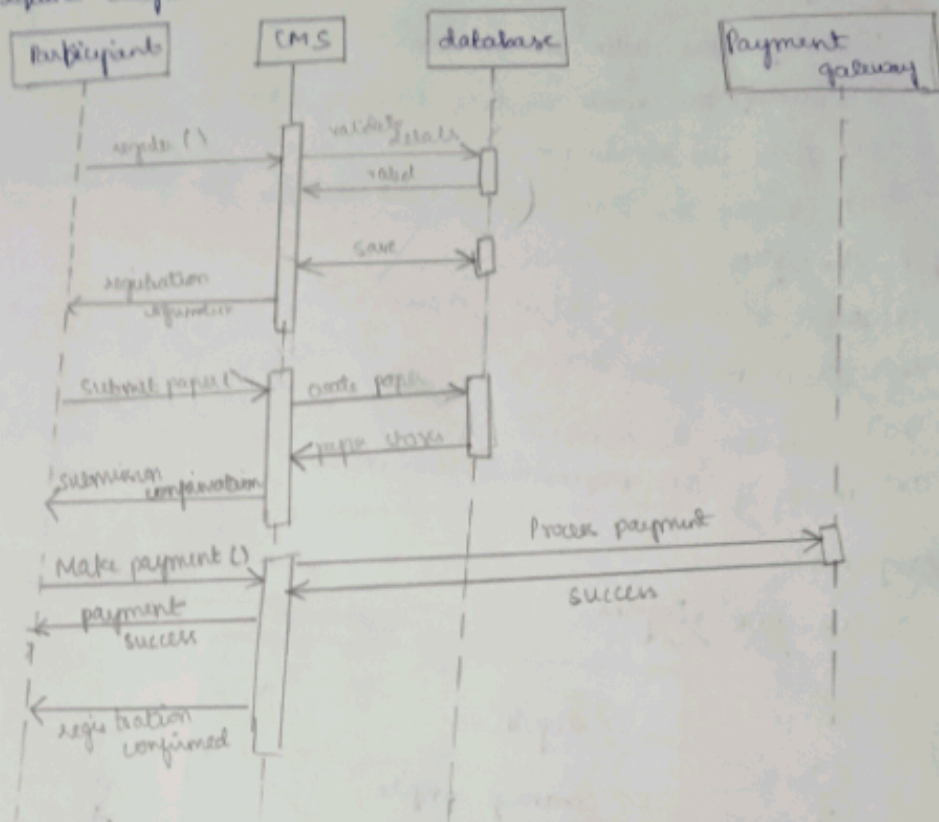

(i) use case

(ii) class diagram

UML Sequence diagram

result:

Thus the Conference Management System was successfully designed using UML diagrams.

2. Foreign Trading System:

Aim:

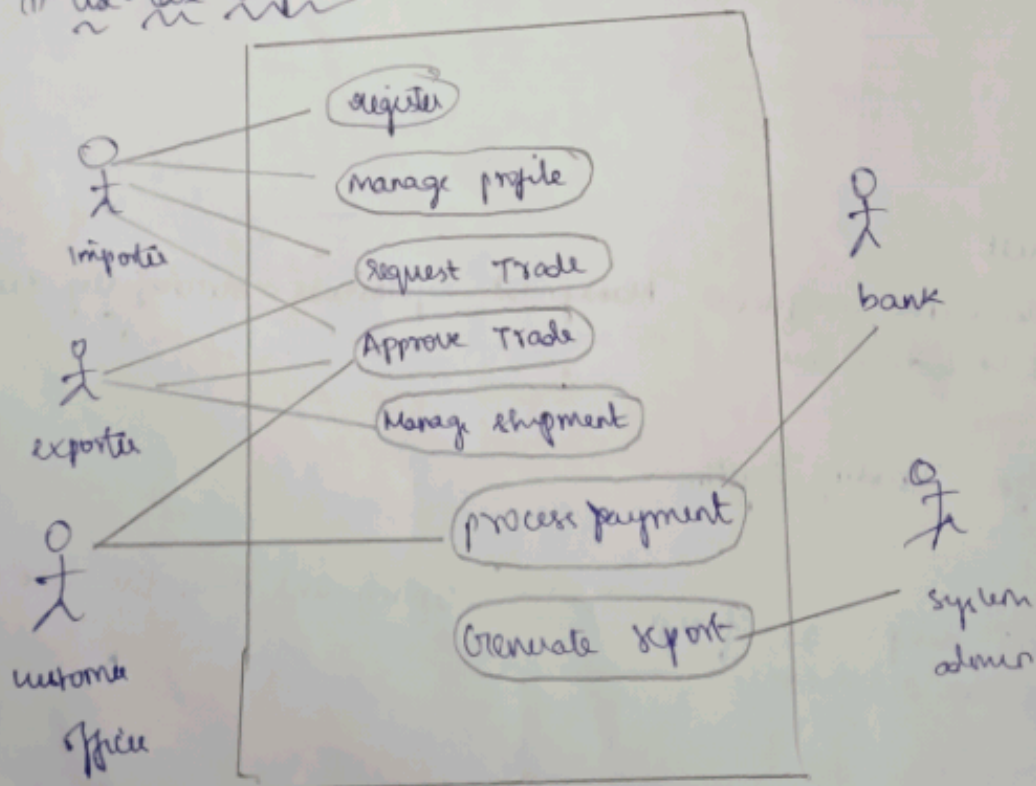

To design a foreign Trading system and draw the Use case and class diagram.

Algorithm:

- (i) Identify the actor and use cases.
- (ii) Identify the main use case for each actor.
- (iii) Draw use case diagram.
- (iv) Identify the classes required and identify the attributes & method for the system.
- (v) Define relationship b/w classes.
- (vi) Draw the class diagram.
- (vii) Select the scenarios.
- (viii) verify if all requirements are covered.

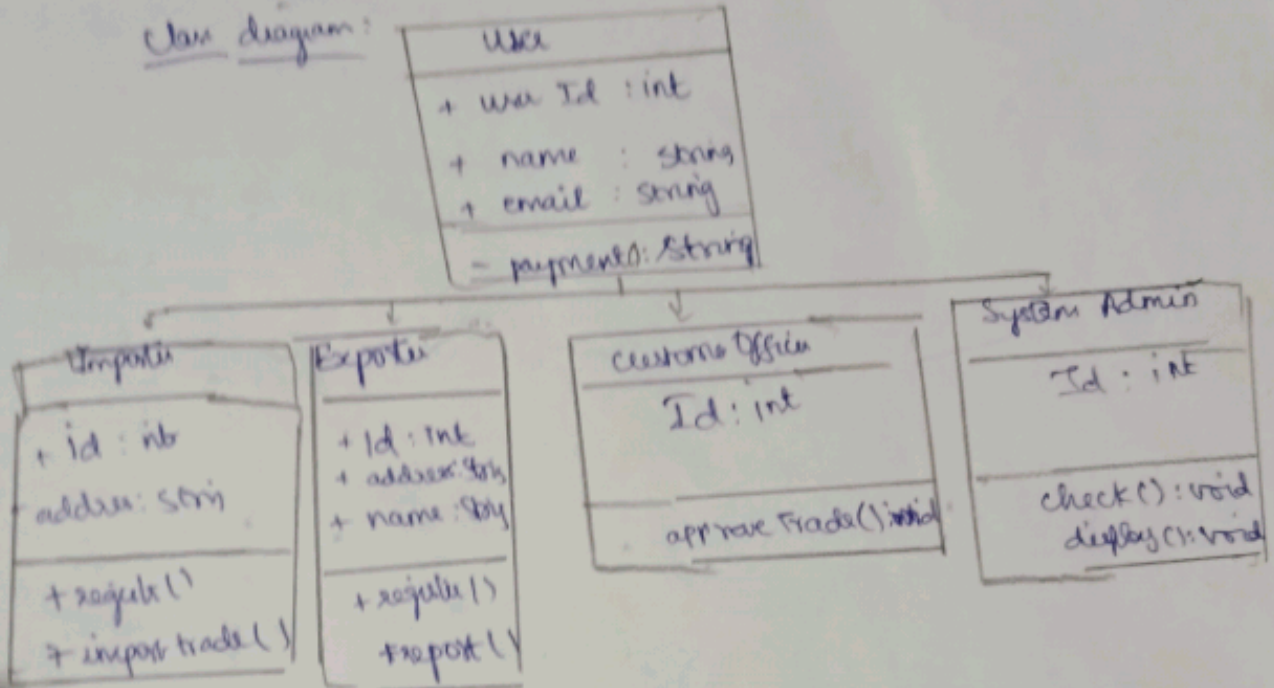

Diagrams:

- (i) Use-case diagram

- (i) Identify the actor and use cases.
- (ii) Identify the main use case for each actor.
- (iii) Draw use case diagram.
- (iv) Start the analysis.

Class diagram:

Result:

Thus the Foreign Trading management system has been done.
